## B. Course Objectives and Learning Outcomes

### 1. Course Description

This course is a comprehensive overview of web security. The goal is to build an understanding of the most common web attacks and their countermeasures. Given the pervasive insecurity of the modern web landscape, there is a pressing need for programmers and system designers to improve their understanding of web security issues. The course will be covering the fundamentals as well as the state-of-the-art in web security. Topics include principles of web security, attacks and countermeasures, the browser security model, web app vulnerabilities, injection, denial-of-service, TLS attacks, privacy, fingerprinting, same-origin policy, cross site scripting, authentication, JavaScript security, emerging threats, defense-in-depth, and techniques for writing secure code.

### 2. Course Main Objective

1. Get hands-on experience on web programming
2. Critically audit web applications for security flaws.
3. Design and implement exploits for real security bugs.
4. Develop secure web applications.
