

E-system unit

General objective:

Integration of modern technology with the academic education system which will raise the level of the educational process and guarantee the efficiency of the educational outputs.

Specific objectives:

1. Provide education 24 hours a day 7 days a week.
2. Provide a learning environment that takes into account the learners privacy and the individual differences.
3. Create an environment suitable for uploading and displaying e-courses for learners.
4. Increase the level of communication between faculty members and learners.
5. Take advantage of the technology revolution and the transition from traditional education to e-learning and distance education.
6. Provide an integrated system to set virtual classroom to increases interaction between parties to the educational process.

Target groups:

Faculty members and learners (male, female).

Initiatives and programs:

Initiatives	programs
Activate the use of e-learning technologies at the university	We are working on link with the Admission and Registration Deanship to activate the system to all users; this will be available for the summer season 1432/1433.
provide virtual classroom software license	Merge "Illuminate" software for virtual classes into the learning management system "Jusur"
Developing courses to be interactive electronic	Provide software that allow uploading e-course

Operational plans:

To achieve the objectives of the unit, Deanship of e-learning and distance education initiated assigning supervisors for the learning management system whom are: Mr. Thamer Ali Al-Dgieshi and Mr. Mohammed Mansour Abahussain. Also, the deanship is currently working on linking the learning management system with the educational database at the university; then the faculty member will be able to access the system and find courses and groups as well as students enrolled in every course. And thus faculty members will add e-content, follow up students' performance electronically and use all the activities available by using learning management system features. Also, the deanship (represented by the system supervisors) will follow-up the educational process, the updates of the system as well as the training and will provide support and all necessarily services for users.
